Hi

Introduction

Time car provides an infrastructure to support a shared virtual world, also known as a metaverse. The Cybercar metaverse supports multiple platforms which remove the barrier of different hardware, software, and operating systems. This enables more users to invite and connect with their friends & family to enhance possibilities in the exponential growth of the user base.

Metaverse

Millions of years ago, a planet called Cybertron appeared with a group of robots with advanced intelligence. They were born with two factions: Autobots and Decepticons. Among them, Bopai is a group of peace-loving, comfortable robots, the Berserkers, they are a group of evil battle robots, who have the ability to fly when they are in Cybertron, and these abilities become their weapons to oppress the Bo faction.

So an unprecedented war began, the war between the Berserkers and the Bo factions lasted until cybertron's energy ran out, and they had to flee the planet, but due to the energy crisis, their ship crashed on the beautiful planet of Earth, and the story began.

Our story takes place 100 years after the Autobots came to Earth, and now the city has become Cybercity, the Autobots help humans improve technology, but also evolved a new type of Autobots, Tesla-R3, which can replace humans to do almost everything and win rewards by serving humans, and constantly improve the body through the intelligent brain, he has a beloved person, he also has his own family, he thinks life will be very happy, It wasn't until one mission that he discovered the deepest secrets of Cybercity.....

Autobots

An Autobot is a virtual character that represents the user within the Time Car metaverse, each Autobot comes in pre-made appearance and animation sets but may be modified by the user itself later. The Autobot will also be modifiable piece by piece (wheels, armor, energy, etc.) by equipping it with different compatible assets tokens. This enables users to create their own unique Autobot to distinguish themselves from other users within the Time Car metaverse.

TESLA

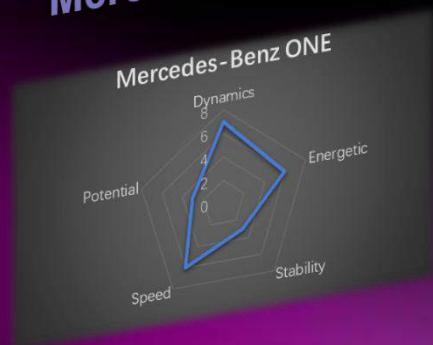

The Tesla-R3 is the most precious breed among the Autobots, with more variable properties.

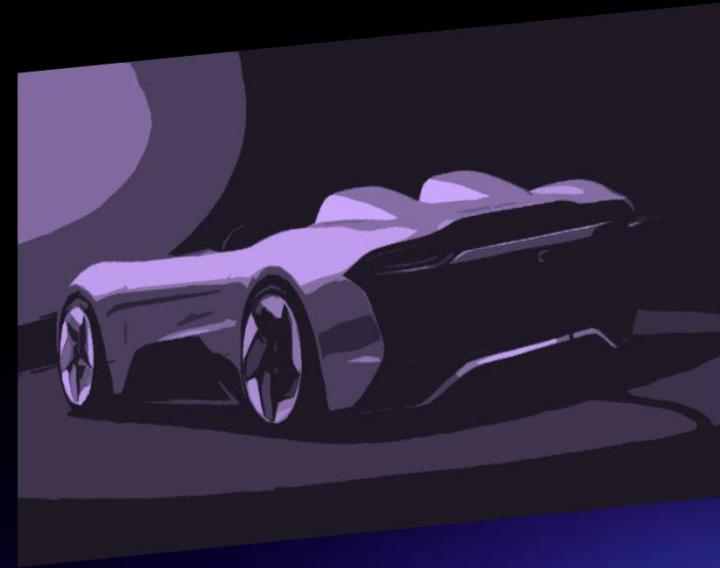

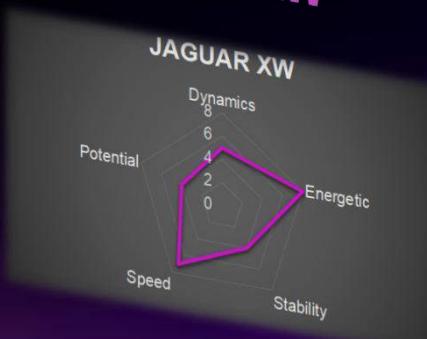

Autobot NFT has different performances, corresponding to different degrees of preciousness.

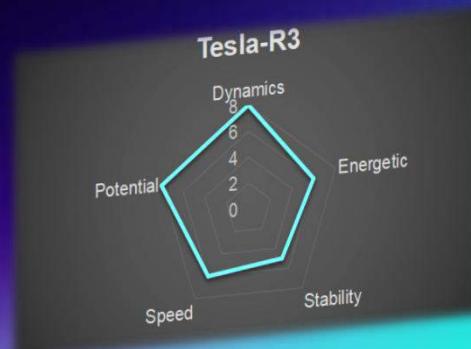

Mercedes-Benz ONE

JAGUAR XW

TESLA-R3

Assets & LAND

Assets & LAND are blockchain-based virtual tokens (Using Binance smart chain) representing physical parcels and objects of the Time car metaverse. It allows users to own a portion of the metaverse and thus be able to host content (examples are toll fees, mini-games, and tickets).

Market

Anything and everything that can be sold will be sold in our open marketplace. This includes:

your place

The Marketplace is a web-based exchange center, however unique to some other projects, we will also be launching the Marketplace within the Time car metaverse, where users will be able to see objects in 3D VR, giving potential buyers a more immersive, customer-centric experience.

Roadmap

2021
Q4

- Token sale
- Private VR demo
- Acquisition of assets: buildings, avatar apparel, and more
 - Building and landscaping

2022
Q1

- 1.1 release (soft launch)
- Multi-player feature
- Introducing staking
 - Assets trading release
 - LAND pre-sales

2022
Q2

- 1.2 release
- Introducing characters and NPC's
- Introducing quests that will incentivize users (Play-to-Earn)
- Add decentralized Finance (DeFi) component
- Introducing to in-game staking

2022
Q3

- 1.3 release
- Launch of Solice Editor Alpha Release
- Starting to develop DAO to the metaverse
- Additional characters and NPC's

2022
Q4

- 1.4 release
- Additional quests
- Additional mini-games
- Improve trading UX
- Launch of Time car Editor Beta Release

VR & Cross-platform

What sets Time car apart from the other projects is the immersive experience of the users by utilizing the technology of VR and the cross-platform component.

Jeffrey Zirlin
Growth Lead of Axie Infinity

Equipment design drawings

Why use VR technology?

At the moment, most of the GameFi projects on the market right now are often only available on a single platform which is either on a smartphone or web-based. This limits the art style and software load of the actual product. By enabling the Time car metaverse on VR, users will get a more immersive feeling to fully enjoy themselves within this virtual metaverse instead of something that is on their computer or phone screen.

Team

Chiyoko | CMO

Paul | CEO

Kevin | CTO

Lin | Ambassador

Our team members are all over the world, in USA, Japan, China, we work in the form of WEB3.0, and future users can participate in our DAO governance.
